

FULL-SERVICE SOLUTION FOR Nondestructive Investigations

What You Need, Where You Need It

Instrumentation
FDH provides a combination of customized and commercial instruments along with proprietary methods to perform NDT.

Tester
FDH personnel are trained to use testing equipment in all kinds of site conditions.

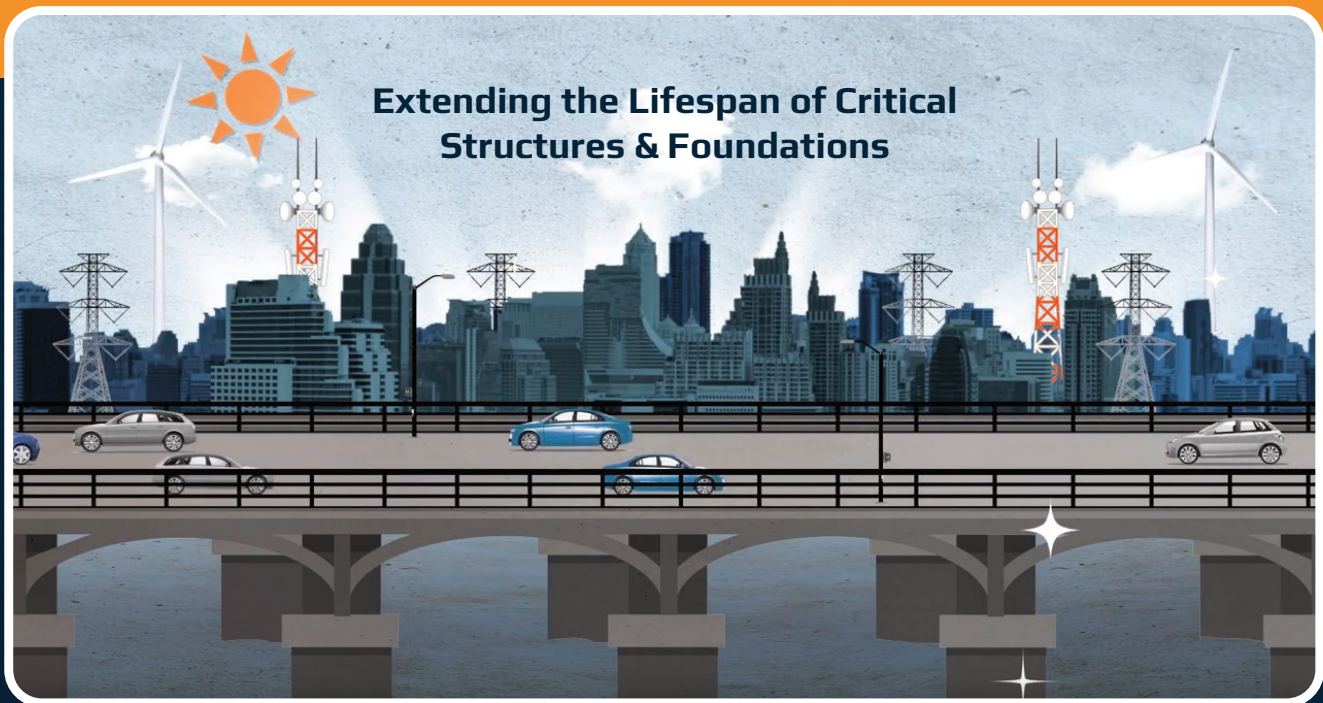

Interpreter
FDH physicists and PhD research engineers accurately interpret data results.

Advisor
FDH experts advise clients on meaning of results and best options to address them.

Analyst
Services may require a professional engineer (PE) stamp. FDH PEs are licensed throughout the U.S. and several U.S. territories.

Designer
FDH's civil and structural engineering teams design remediation solutions.

Installer
FDH's construction management team oversees installation of selected solutions.

FDH partners with engineering firms and construction contractors to bring their teams specialized NDT knowledge and industry expertise, providing tailored solutions ranging from field investigations to full turnkey services.

Bringing Knowledge About What's Underground to the Surface
